

Njala University, Njala

Date: 25th March, 2022

Year: 4

Module: Distributed and Concurrent System

Code: COMPS 4129

Instructor: Dr. Foday M. Kallon

Duration = x, 45 minutes < where $x \leq 3$ hours. Time = 10:00 am – 1:00 pm

Attendance 10%

Assignment 20%

Examination 70%

Instructions: Answer question Four (4) questions.

Q1. (a) Describe a standard computer distributed system

(b) State three (3) significant characteristics of a computer distributed system.

Q2. (a) Name four (4) examples of a distributed system applications

(b) Explain parallel concurrency through the aid of a diagram.

Q3. (a) Give a diagrammatic representation of non-parallel or pure concurrency.

(b) Give a real world example of concurrency.

Q4. (a) What does a distributed system do in its setting and environment?

(b) Give a labelled diagram that allows distinction between parallel and distributed computing.

Q5. (a) State the advantages for using distributed system.

(b) State four (4) examples of distributed system applications of distributed computing.

"Planning replaces coincidence caused by error" - Albert Einstein, the Atom physicist
